

RAYSCAN

Three Options with Max FOV of:

16×10 | 12×10 | 8×8

Pano / Ceph / CBCT / CT Impression Scan

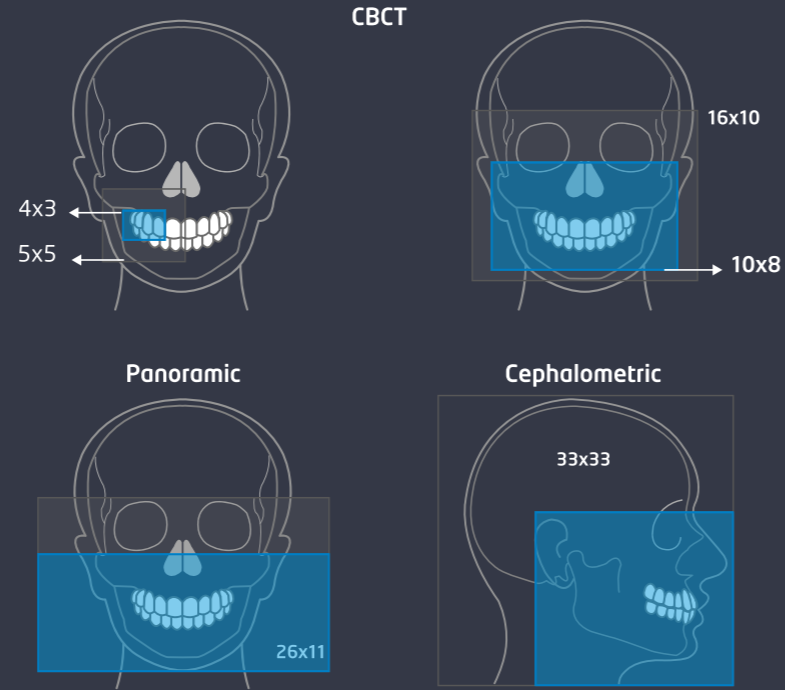

Visible X-ray Guide

- The world's foremost visible X-ray guide prominently indicates the location of the scan area.

Users can effortlessly capture the region of interest using a patient-safe visible blue-light guide method, ensuring convenience and safety.

Dose Reduction

- Type of Patient Protocol
- Column Up/Down
- Canine beam adjustment (Pano mode)
- Pre motion (CT mode)
- Laser beam on/off
- Blue light guide on/off
- 90 degree rotation
- Collimator adjustment
- Ready/Cancel

Wireless Remote for Maximum Convenience

- For patients and healthcare professionals alike, our remote control empowers them with effortless operation, allowing them to focus on what truly matters-the treatment outcome.

Superior Image Processing Technology

Specialized for Endodontic Procedures

See more details using a high-resolution CT image in a specific area.

Have more confidence before, during, and after the procedure with increased awareness.

Do more procedures in less time.

More details, more confidence, more procedures

View CT Images in Less than 10 Seconds

Scan your patients faster than ever before!

66% faster scan, ideal for implant placement validation and for patients than cannot hold still.

Fast scan mode radiation dose is only **22.9 μ Sv**

One Shot Cephalometric

One-shot cephalometric imaging acquires images in less than 1 second to reduce image distortion.

Choose from two sizes of one shot Cephalometric sensors.

A scanning Ceph is also available for a small overall unit footprint.

One Shot Cephalometry

Out cutting-edge Flat Panel Detector (FPD) provides a new level of performance and reliability while reducing radiation exposure and image distortion due to patient movement. Two different sizes of FPD are available.

Scanning Cephalometry

Our scanning ceph module allows clinicians to upgrade their diagnostic capabilities while keeping costs to a minimum.

Clear Panorama

- AMF (Adaptive Moving Focus) technology selects the optimal image layer to provide clear panoramic images, making it easy to identify the patient's periodontal condition and lesion location.

The state of the art technology for high-definition image quality

FMX (Full Mouth X-ray), extracting from panoramic image

Object Scan in combinaton with RAYDent Solution

Object scan is a breakthrough 3D scanning method to acquire 3D data from impressions and plaster models

- Digital production of dental appliances in clinic or lab.
- Applications include crowns & bridges, implant surgical guides, endo guides, tooth aligner, and more.
- Online design support.
- Seamless workflow from **CT scanning to 3D printing**.

No matter where you are Rayguard IoT

'RAYGuard' is an Excellent Support System

24/7 monitoring system

- We monitor all of our installed X-ray units using an advanced IOT system called RAYGuard.
- RAYGuard's 24/7 monitoring support significantly reduces the time required to address detected issues.
- By proactively equipping the support team, it minimizes the need for multiple visits to resolve the same issue, enabling more efficient resolution.

The RAYGuard software interface is displayed on a computer monitor. The main dashboard features a table with columns for Serial Number, Connection Status, Alert Status, Alignment Status, QC Status, Model, Owner, and Operator. Below the table is a map showing the location of a device. An inset window provides a detailed view of a device, including its location on a map and technical specifications.

| Serial Number | Connection Status | Alert Status | Alignment Status | QC Status | Model | Owner | Operator |
|---------------|-------------------|--------------|------------------|-----------|----------|----------|----------|
| 8420001 | Connected | OK | OK | OK | Ray 4000 | Ray Corp | John Doe |

Various FOV Options

RAYSCAN $\alpha+$ comes in three different maximum Cone Beam CT FOV configurations:

RAYSCAN $\alpha+$ 80 (8×8)

RAYSCAN $\alpha+$ 120 (12×10)

RAYSCAN $\alpha+$ 160 (16×10)

As well as three different cephalometry options:

One Shot Ceph (two sizes) and Scan Ceph.

Specifications

| | |
|-------------------------------|--|
| Type | Cone Beam CT, Panoramic, Cephalometric, Object scan (CT Impression)* |
| Patient Positioning | Standing (Wheelchair accessible) |
| Focal Spot | 0.5 mm |
| Tube Current | 1~17 mA |
| Tube Voltage | 60~90kV |
| CBCT | |
| FOV Size | Max. 16×10, 12×10, 8×8 (H) cm |
| Free FOV support | Yes |
| Scan Time | 4.9~14 sec |
| Voxel Size | 70~400 μ m |
| Fast Scan Mode | Yes |
| Object Scan Support* | Yes (CT Impression & Model scan) |
| Panoramic | |
| Image Size | Max. 15(H)cm (16×10) |
| Free FOV Support | Yes |
| Scan Time | Max. 13.9 sec |
| Cephalometric (Option) | |
| Type & Scan Time | SC (Scanning Ceph) Max. 20 sec OCS (One-Shot Ceph Standard) Max. 0.8 sec OCL (One-Shot Ceph Large) Max. 0.5 sec |
